# KEON PIERRE

## SOFTWARE DEVELOPER | FINANCE & CONTROLS

Portfolio | keonlmp@gmail.com | Peterborough, ON (Remote) | GitHub | LinkedIn

## PROFILE

Six years as a treasury accountant reconciling client fund accounts and processing millions in weekly payments, followed by four years as a software developer owning billing and access-controlled internal tooling at an enterprise AI company. I understand controls from both sides: as the person whose work is audited, and as the developer who builds the systems being assessed. Looking to bring that combination to governance, risk and compliance.

## PROFESSIONAL EXPERIENCE

### SOFTWARE DEVELOPER

Zetane Systems — November 2022 - Present

*Promoted from Junior Front End Developer, July 2026. Billing subject-matter expert.*

**Access control and audit**

- Moved the internal admin panel behind Google IAP so access is governed by Google Workspace groups rather than developer-editable permissions, scoped by region, with every admin action logged to the operator's identity
- Built a read-only, audited production data explorer with region-scoped permissions and a SELECT-only SQL runner, removing the need for direct production cluster access
- Identified and fixed two access-control gaps in production: cross-site reads and writes through a staff session, and a path pattern that bypassed an access deny-list
- Replaced a support script that required production cluster access with an idempotent, audited admin workflow for granting credits

**User lifecycle (joiner, mover, leaver)**

- Built B2B organization provisioning across identity, billing and database in a single transaction, rolling back fully if any step fails
- Implemented Owner, Admin and Member roles, seat limits, and offboarding that ends a removed member's sessions immediately and stops their scheduled jobs

**Billing and revenue integrity**

- Built most of the billing platform: plans, trials, multi-currency pricing (USD, CAD, EUR), quotas, a compute-credit ledger, and invoiced accounts with net terms and automatic tax
- Led two Stripe API migrations; found and fixed silent breakages in renewal dates, invoice payment recording and promo codes, which also resolved duplicate subscriptions and paid customers being served free-tier quotas
- Caught a defect giving yearly-plan customers one-twelfth of the compute they paid for
- Made payment webhook signature checks fail closed and separated production, Canadian and staging environments sharing one payment account

### TREASURY ACCOUNTANT

360insights — April 2016 - May 2022

*Promoted from Accounting Associate, July 2019.*

- Processed tens of thousands of weekly sales associate payments and consumer claims, typically about $3 million a week with peaks up to $7.5 million
- Reconciled operating and client fund bank accounts monthly for Canadian and US subsidiaries and acquired companies, within a three-business-day close
- Integrated acquired companies' bank accounts into treasury processes
- Managed vendor relationships and directed clients to increase funds held, securing increases of up to $150,000 to keep consumer payments on time
- Used platform and database analysis to resolve 20+ finance inquiries a week from clients, management and other departments

## SKILLS

- **Controls and risk:** Access control, least privilege, audit logging, user provisioning and deprovisioning, bank and account reconciliation, payment operations
- **Technical:** Python, FastAPI, SQL, React, JavaScript, Google Cloud (Storage, IAP), Auth0, Stripe, GitLab
- **Ways of working:** Cross-functional requirements with finance and support, AI-assisted development and automation

## EDUCATION

**Ontario Tech University**, BCom (Honours), Major in Finance; Minor in Accounting — **2016**

**Juno College of Technology**, Immersive Web Development Bootcamp — **2022**
